Floor Plans

Renovations & Tenant Improvements

Building Renovations

The entire building has been undergoing extensive renovations. Renovation work on the interior space that will be occupied by Bellingham Retina Specialists is complete and is nearing completion for Northwest Oral & Maxillofacial Surgery. The exterior building renovation plans have been completed and the actual work is in process. The general contractor for the renovation work is Constantine Builders of Lake Forest Park.

Tenant Improvements

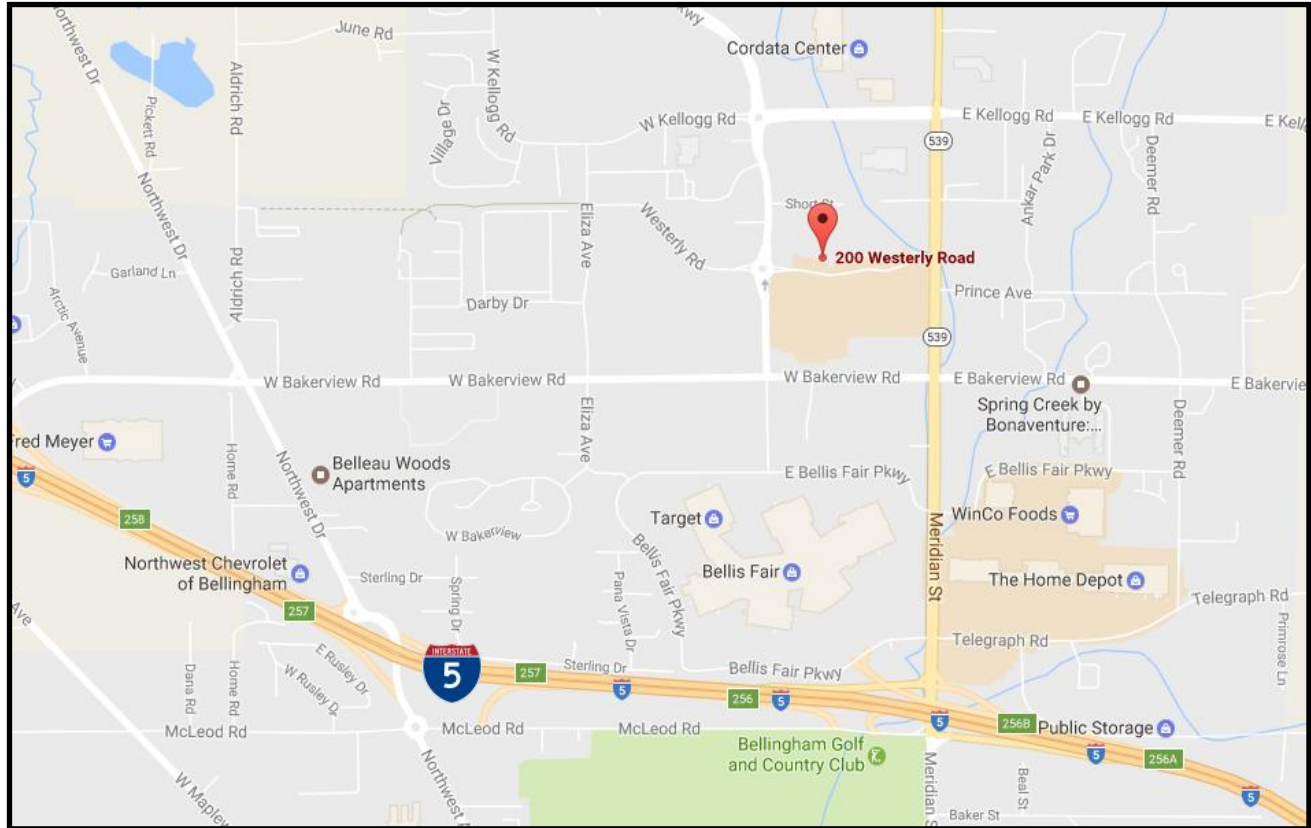

The landlord is willing to finance an unusually large amount of interior improvement work for the entire leasable space. The landlord will amortize the cost of such renovations over the term of the lease, with a minimum acceptable term of 5 years. The most efficient manner of designing, permitting and completing such improvements would be for the Landlord's architectural firm and general contractor to provide the necessary services for a tenant concurrently with the Landlord's work to be completed in the rest of the building. Subject to the Landlord's final approval of the proposed renovations, any reasonable modifications may be included within such renovation plans.

Option for Division of Space

There are 4,099 square feet of leasable space in the south one-half of the building. That entire space is divisible into two or possibly three separate spaces, subject to Landlord's approval of the design, cost, timing and of governmental entities. In the case of such division, the tenant improvement allowance will be divided based on the percentage of square footage of each space to be created relative to the whole.
